ABOUT ME

I'm a front-end developer with experience in technical troubleshooting and QA who is committed to building accessible and responsive front-end applications that are user-friendly. I'm passionate about writing clean and concise code, as well as collaborrating in a team to get the jobs done!

PROJECTS

PODCAST PLANNER
React| REST API | CSS | FIREBASE
Created in a group agency style project. Allows the user to find, and create various podcast playlists based on the amount of time they have.
Live Link **GitHub Repo**

LETS GO TO THE MOVIES
React | REST API | CSS | HTML
Sometimes the hardest part of watching a movie is deciding what to watch. This movie app was created with React using a RESTful API to display the movie information in an interactive way to help the user decide what to watch!

EXPERIENCE

APPLE SERVICE TECHNICIAN
Core 1 & Carbon Computing | Aug 2018 - current
- Responsible for repairing computers and ensuring an efficient turnaround time for repairs was met.
- Correctly ran tests and various QA checklists to ensure that the job was completed correctly and the issues resolved.
- Implemented a new ticket tracking system in a team, as well as suggesting options to improve the system in order to streamline communication and remove the probability of issues arising.
- Communicated with customers to correctly set expectations in terms of repair requirements, which led to a faster turnaround time.
